Experience

Software Engineer Intern New York, NY
InPress Jun 2026 – Aug 2026

- Created a user friendly dashboard for cross functional stakeholders.
- Monitored the live feedback and constant testing to find exploits and bugs in the mobile app.
- Applied common GitHub Flow practices to maintain proper work documentation.
- Profiled a production Python ML Pipeline, tracing ~80% of peak memory to a single scrape-embed-serialize stage.
- Redesigned embeddings storage, cutting total size by more than 60% with no loss in precision, projecting over 180 GB one to one recovery of data across a 6 M rows.

Freelance Web Developer New York, NY
NYC Flooring Jan 2026 – Feb 2026

- Engineered an interactive contact form using JavaScript for potential customer request project estimates through the website.
- Collaborated with business owners to turn their ideas into website features, improving layout and design through regular feedback cycles.
- Improved user experience on phones and computers by creating a responsive layout that clearly shows project photos and company information.

Back-End Developer New York, NY
Sports Excitement Jan 2025 – June 2025

- Implemented a user authentication using Json Web Tokens, reducing login errors and strengthening security.
- Built user friendly dashboards displaying the options for backend servers and cloud services with scalability and affordability in mind.
- Debug authentication, profile, and home screen features to ensure user data updates correctly and the application runs reliably.

Projects

ML News Editor

- Researched different ML models to find the best for the results I wanted according to the data
- Built an end-to-end machine learning system that recommends news articles to editors, cutting the daily review pile from ~12,000 scraped articles down to a ranked shortlist of 8 per section.
- Designed a multi-stage filtering pipeline that automatically removes low-quality scraped articles (missing images, wrong length, no category), discarding over 50% of raw input before any expensive processing.

Debt Tracer

- Collaborate with a team of 5 developers to build an AI-powered application that helps users track and work toward their financial goals.
- Help implement secure backend authentication using JSON Web Tokens (JWT) to protect sensitive financial information.
- Use MongoDB to store and manage application data, improving reliability and allowing the platform to scale as more users are added.
- Optimize database queries to reduce load times and improve overall application performance.

Education

New York City College of Technology Brooklyn, NY
Bachelor of Technology in Computer Systems Expected Dec 2026

Skills

Programming: Python, Dart, JavaScript, Java, HTML5, CSS,C++, SQL (MySQL, PostgreSQL, NoSQL)
Technologies: Android Studios**,** Node.js, Express.js, MongoDB, JSON Web Token (JWT), VS Code, Git/GitHub, Windows, JIRA
